Boden Conference

Plant Energy and Water Productivity

from genes to environment

Thursday 18th – Saturday 20th
September 2008

Robertson Lecture Theatre,
Australian National University
Canberra

The impacts of global climate change and drought on the environment and agriculture, coupled with the need to increase the supply of food and bio-energy for a growing world population, provides plant scientists with a major challenge.

The aim of the symposium is to bring together a diverse group of scientists to consider future strategies necessary to develop improved plants for agriculture and biofuel production and the performance of plants in natural environments.

Day 1: Water Productivity:

- Control of transpiration.
- Roots and hormone signalling.
- Roots and hydraulic signalling.
- Drought stress and reproductive development.

Day 2: Plant Energy:

- Enhancing CO₂ uptake efficiency.
- Light and oxidative stress tolerance.
- Organelle biogenesis.
- Organelle metabolism.

Day 3: Plant Products and Bio-fuels:

- From artificial photosynthesis to bio-fuel production.
- Respiration, photosynthesis and stress tolerance.
- Genomic approaches to future improvements.
